Intility + DigiPlex sets towards a sustainable future

DigiPlex and Intility have reduced the power needed for cloud services. Intilitys over 500 customers will now consume just 8.8W per hour per user, slightly more than what is needed to charge an iPhone.

In a world with ever-growing energy consumption and data generation, energy efficient data centres are vital. In fact, the world's data centres now uses more power than Britain's total consumption, and accounts for two percent of the world's emissions of greenhouse gases. Experts predicts that power consumption will double in every four years. DigiPlex CEO, Gisle M. Eckhoff calls for a cleaner and greener data centre industry.

- *Digitization needs to be a step on the way for the world going green. Therefore, the data centre industry's power consumption and emissions are not sustainable for the future, says Gisle M. Eckhoff, CEO of DigiPlex.*

Intility and DigiPlex has entered a partnership and together they will ensure that Intilitys customers use a minimal amount of green renewable energy. Through using a DigiPlex data centre, Intilitys 500 customers will consume approximately 8.8 W per hour per user, for their green, ISO-certified and energy efficient cloud services. This is slightly more than the amount of energy used to charge an iPhone. Intility CEO, Andreas Hisdal knows that there is just one way into the future, the sustainable way.

- *For Intility, it's critical that we can deliver cloud services that are sustainable for the future, says Andreas Hisdal, CEO of Intility*

Intility is a complete Workplace-as-Service and a cloud-based IT platform for digitization. The solution ensures satisfied employees and a platform for companies that wants to utilize IT to increase their own productivity and competitiveness. The Intility platform is continuously upgraded with new functionality, and includes an ever-increasing number of integrated cloud services such as Microsoft Azure, Office 365, Amazon Web Services and Salesforce. Currently more than 500 companies utilize Intility, including The Airport Express Train (Flytoget), BDO and Scatec Solar.

DigiPlex designs, builds and operates data centres in the Nordic region. The company specialises in delivering tailored, secure and resilient environments with the highest possible availability. Both private and public organisations, including security-sensitive customers such as government and financial institutions, trust DigiPlex data centre solutions. All DigiPlex data centres are powered exclusively by sustainable sources of electricity.
