DigiPlex wins Big Data and IoT Excellence Award

Award recognised DigiPlex for its innovation in technology, environmental sustainability and international appeal

DigiPlex, the Nordic leader for innovative and sustainable data centres, has won the “Outstanding Big Data Management Solution Award” at the annual Big Data and IoT Excellence Awards in London, hosted by Computing Magazine.

The Big Data & IoT Excellence Awards celebrate the achievements of the IT industry's most remarkable companies, solutions, products and personalities working with big data and the internet of things.

DigiPlex entered the awards as a market-leading innovator, articulating both the sophistication of its data centre solutions and its commitment to clean energy and sustainability. Leveraging both the incredible geographic and political advantages of the Nordic region, DigiPlex was recognised as an example of a new generation of data centre providers, which maximise savings, reduce carbon-footprint and offer a customisable, scalable service.

The awards were judged by a panel of *Computing's* editors and prestigious experts from a range of businesses, including CERN, Northumbria University and the European Space Agency.

“It was clear to the judging panel that DigiPlex is committed to taking a position of leadership in its industry. DigiPlex data centres combine the provision of a valuable business solution with a great sense of social responsibility. DigiPlex is a great example of the extent to which established solutions are being innovated upon,” says Stuart Sumner, Editorial Director, Computing.

“We are incredibly honoured to be the first data centre provider to be recognised by these awards for our innovative and sustainable data centre solutions. We see the environmental footprint of data centres become an increasingly important issue for companies in the coming years, even while demand continues to accelerate. We are delighted our efforts to provide the market with a sophisticated and future-fit solution recognised among such prestigious companies,” says Gisle M. Eckhoff, CEO at DigiPlex.

This award is the latest in a string of recent recognitions for DigiPlex. In April the company was included among the ‘20 Most Promising Data Center Solution Providers 2017’ by CIORReview and in December DigiPlex won the ‘Critical Environment Future Thinking Award’ at the annual EMEA DCD Awards’. DigiPlex is also a finalist for the ‘Data Centre Above and Beyond Award’ at the upcoming DataCloud Europe conference in Monaco.

About DigiPlex

DigiPlex designs, builds and operates data centres in the Nordic region. The company specialises in delivering tailored, secure and resilient environments with the highest possible availability. Both private and public organisations, including security-sensitive customers such as government and financial institutions, trust DigiPlex data centre solutions. All DigiPlex data centres are powered exclusively by sustainable sources of electricity.

About Computing's Big Data and IoT Excellence Awards

Computing is the UK's leading business technology publication. The inaugural 2017 Big Data & IoT Excellence Awards program honour the achievements of the IT industry's best Big Data and Internet of Things (IoT) companies with product, solution and project-related awards as well as organisational categories and accolades recognising outstanding individual achievement.
