

## DigiPlex strengthens its position with new standards

**DigiPlex is strengthening its business with two new important standards – ISO 9001:2015 and OSHAS 18001. They both demonstrate DigiPlex’ ambitions to be one of the most respected and reputable datacentres in the world. In a complex and competitive environment, with extreme requirements on quality and deliverables, it is business crucial to focus on continuous improvement.**

- *These standards are important milestones in our continuous work in improving our business. We support some of the leading and best managed companies in the world and we are determined to be their best partner in our field. Their standards are our standards, says Gisle M. Eckhoff, DigiPlex CEO.*

Being certified with the ISO 9001:2008 standard, DigiPlex decided to upgrade the standard to the new ISO 9001. The new parts of the standard highlights tools to promote a sustainable development and the performance of the organisation. Risk management, business intelligence and a clearer link to the business plan and strategy are some of the changes. The primary drivers for DigiPlex, upgrading to ISO 9001:2015, is a commitment to continuously improve the business and firmly establish DigiPlex as a leading player in its field for customer service and quality in delivery.

DigiPlex also receives OSHAS 18001 award. OSHAS 18001 is a well-recognized and popular occupational health and safety management system. The system will support DigiPlex in establishing place policies, procedures and controls to achieve the best possible working conditions. It also ensures workplace health and safety, aligned to internationally recognised best practice.

Sweden’s largest planned co-location data centre, also representing one of the most energy efficient and sustainable data centres worldwide, received international ISO certifications for ISO 14001 and 27001 in May 2016. Developed by DigiPlex, the facility is built on this previous success and achieved the top international standards for both the Quality management and Health and Safety. This places DigiPlex in the top segment being one the best performing businesses in the data center industry in Sweden.
